Changing Lives Every Day

The physicians and staff at Barnet Dulaney Perkins Eye Center are passionate about preserving and enhancing vision at every stage of their patients' lives. Committed to staying at the forefront of technological innovations, they use the most advanced diagnostics to evaluate and treat eye conditions, such as cataract surgery, vision correction, glaucoma treatment, comprehensive retina surgery, diabetic retinopathy and macular degeneration.

For over 30 years, Barnet Dulaney Perkins has led the world in leading-edge eye care. It was the first LASIK provider in the U.S. to introduce the Allegretto Wave Laser, the only advanced LASIK technology that maintains the cornea's natural shape and improves night vision by reducing glare and halos. Its physicians have more than 10 years of experience with the implantable contact lens (ICL), an alternative to LASIK, and proudly implant more ICLs than any other clinic in the country. Its retina surgeons use the world's best imaging system for retinal and macular diseases. Heidelberg high-definition imaging systems, available at most locations, allow for superior imaging and diagnosis of disease processes related to the retina.

The staff includes 12 board-certified ophthalmologists with specialties in lens replacement surgery for cataract removal, vision correction, retina, glaucoma, cornea and neuro-ophthalmology, as well as 22 medically certified optometrists. A world-recognized research and educational facility, the practice has participated in

more than 30 clinical trials leading to new technologies and advanced vision care techniques. Its physicians are dedicated to sharing their expertise with not only patients but also the global medical community.

Two surgeons at Barnet Dulaney Perkins Eye Center have been nominated this year by *Super Doctors*[®]. Nationally recognized ophthalmologist **Scott A. Perkins, MD** has performed more than 50,000 cataract surgeries and 10,000 vision correction procedures such as LASIK and ICLs. Highly regarded as an innovator in ophthalmology, he has participated in more than 25 clinical trials for both pharmaceutical and ophthalmic devices. **Jack O. Sipperley, MD** is also a recognized pioneer in the field, specializing in vitreous diseases and retina surgery. In addition to his practice, he has served as Director of Research and principal investigator for several National Eye Institute studies in Phoenix.

Locations throughout Arizona include five in metro Phoenix and three in Tucson in addition to Flagstaff, Showlow, Sedona, Cottonwood, Safford and Globe.
