Currently celebrating its 35th anniversary, the Bone and Joint Clinic of Houston is the oldest orthopedic group in the Texas Medical Center, and is comprised of nine exceptional physicians who practice a wide range of orthopedic specialties. The clinic was founded in 1970 by Dr. Arthur Glassman and Dr. Sherwin Siff; Dr. Malcolm Granberry joined the group soon thereafter. As such, the clinic is proud to have three of its physicians — Dr. William Granberry, Dr. Sherwin Siff and Dr. Todd Siff — honored as Texas Super Doctors. Other physicians at Bone and Joint Clinic of Houston include Dr. Roy Smith, Dr. William Watters, III, Dr. Thomas Greider, Dr. Walter Sassard, Dr. Marc Labbe and Dr. Frank Gerow. All physicians are board certified with the American Board of Orthopedic Surgeons and are members of the American Academy of Orthopedic Surgeons.

The group is deeply dedicated to providing its patients with excellent, attentive care and treatment, and prizes its ability to share its knowledge and experience with medical students, residents and fellows. All nine physicians are on the faculty of Baylor College of Medicine (ranking from Clinical Professor to Clinical Assistant Professor), and many are faculty members at the University of Texas Medical School of Houston; they practice at St. Luke’s Episcopal Hospital. Additionally, the physicians are lecturers, members and leaders in orthopedic specialty organizations on the local, state and national level; many conduct scientific research, including National Institute of Health grants and clinical trials. All such efforts are made in an attempt to improve and facilitate patient care, treatment, and outcomes, and to assist in the overall advancement of orthopedic surgery.

The primary focus of the Bone and Joint Clinic is personalized, accessible patient care. Physicians and staff partner with their patients to offer timely access to the most appropriate treatments for their orthopedic conditions, including joint replacement; pediatrics; sports medicine; and hand, foot, scoliosis, arthroscopic and spinal reconstructive surgery. The clinic strives to provide thoughtful, friendly service, and to answer its patients’ questions in straightforward, understandable terms. The doctors also go to great lengths to discuss the meanings of test results and medical treatment options with patients and their families. With this clear, humane approach, the clinic has a reputation for being very conservative and for being a champion of individualized care; in many cases, surgery is the last option. Ultimately, the Bone and Joint Clinic of Houston makes every effort to help patients return to a normal lifestyle as soon as possible.
