

**H**ouston IVF and staff are pleased to be celebrating their fifth anniversary serving Houston area patients. A sister clinic of the Colorado Center for Reproductive Medicine (CCRM), Houston IVF implements the same standards, protocols, and attention to detail utilized by CCRM. This ongoing collaboration has resulted in outstanding success rates and has played a vital role in Houston IVF becoming a leader of infertility care.

## OUR GOAL IS HEALTHY CHILDREN.

Through a unique combination of personalized care and state-of-the-art technologies, Dr. Timothy Hickman and Dr. Laurie McKenzie help make patients' dreams come true. Houston IVF revolutionizes fertility medicine through individual treatment services. Rather than a standard program for each patient, Drs. Hickman and McKenzie specifically design a treatment and stimulation program for every patient to ensure the greatest possibility of success. Houston IVF and CCRM have an international team of research scientists, led by Dr. David Gardner, who work on cutting-edge technologies on behalf of all IVF patients.

Actively involved with the Society of Assisted Reproductive Technology (SART), Drs. Hickman and McKenzie are members of numerous professional medical societies and are widely published in the fields of infertility and IVF. The doctors also offer free patient seminars and infertility support groups for the public.
