“We are working hard to support a culture of innovation at Children’s Mercy,” says Dr. Charles Roberts, executive medical director/executive vice president. “We want our faculty asking questions, exploring answers, and doing everything they can to help each and every child that comes into our care.”

One child at a time.

That’s how the doctors at Children’s Mercy Hospitals and Clinics have always approached patient care—with a commitment to treat each child uniquely.

The approach has never been more applicable than it is now as Children’s Mercy continues to build its nationally renowned clinical pharmacology and personalized medicine programs, launch a new global center for pediatric genomic medicine, and use state-of-the-art research and knowledge to develop more effective medicine and treatments specific to the unique physiology and needs of each individual child.

“We are working hard to support a culture of innovation at Children’s Mercy,” says Dr. Charles Roberts, executive medical director/executive vice president. “We want our faculty asking questions, exploring answers, and doing everything they can to help each and every child that comes into our care.”

Those children come from Missouri and Kansas, as well as surrounding states and around the globe, for the expertise of the hospital’s more than 400 faculty members representing 40 plus specialty areas. Academically affiliated with the University of Missouri–Kansas City, the

faculty members are not only outstanding clinicians and researchers, but also teachers training the next generation of pediatric specialists.

Innovation and ground-breaking research pave the way as the doctors and surgeons at Children’s Mercy continue to be nationally recognized for their contributions to advancing pediatric medicine. This past summer, *U.S. News & World Report’s* 2011 “Best Children’s Hospitals” issue ranked Children’s Mercy among the nation’s top pediatric medical centers in all 10 specialties rated by the magazine.

“We are proud to be recognized as one of the best children’s hospitals in the nation,” says Dr. Randall L. O’Donnell, president and CEO of Children’s Mercy. “It is an honor that reinforces the commitment of our entire staff to provide the finest medical care to our children and their families.”

Children’s Mercy has also received the prestigious Magnet designation for excellence in nursing—awarded to less than five percent of all hospitals nationwide—and takes pride in being the first hospital in the country to have more than 500 pediatric certified nurses.

With a staff focused on expertise, innovation, and a commitment to providing excellent patient care, Children’s Mercy is truly redefining pediatric medicine—one child at a time.
